Summary

Front-End Developer with 6 years of experience, specializing in Next.js and TypeScript, with a strong focus on building scalable and maintainable applications. This includes 3.5 years of remote experience with a U.S.-based company, working on complex, long-term products for markets in the U.S., Canada, and Europe — from owning front-end structure and implementation to solving integration, UI, and UX challenges across multiple concurrent projects.

Professional Experiences

Front-End Developer | IFS Company

Remote (Dubai, UAE) | Part-Time | Oct 2025 – Jan 2026

- **Platform Expansion:** Extended a mobile-first, Instagram-style social app, built for a U.S.-based client and market, into a fully responsive desktop experience.
- **UI Ownership:** Built the marketing landing page from scratch using Next.js, Tailwind CSS, and HeroUI.
- **API & State Integration:** Delivered UI and integration work on core product screens using GraphQL and React Query.
- **Quality & Stability:** Maintained code quality and resolved production bugs within Jira-managed sprints.

Front-End Developer | Apsy Company

Remote (Los Angeles, CA) | Full-Time | May 2022 – Sep 2025

- **Technical Maintenance & Troubleshooting:** Worked directly with backend engineers, designers, QA engineers, and product managers on complex applications for U.S., Canadian, and European markets, identifying architectural issues and proposing front-end solutions.
- **Front-End Ownership:** Owned the front-end architecture and end-to-end implementation of select flagship products, building on the company's initial boilerplate and making front-end architectural and technical decisions throughout development.
- **Ad-Hoc Problem Solving:** Joined other projects on an as-needed basis to resolve integration, UI, and UX issues — from isolated bugs to complete feature rebuilds — without becoming a permanent member of the project team.
- **Team Collaboration:** Worked alongside other front-end developers across 4 different internal teams, each with its own backend engineers, QA engineers, and product managers. Depending on the project, joined from kickoff to own a distinct module, or joined an existing team to take responsibility for the project's full scope, a major module, or a specific feature.
- **Concurrent Project Delivery:** Worked across multiple concurrent projects, taking full ownership of one product while contributing to others as a problem-solver on specific modules or features, depending on project needs.
- **Component Ecosystem & Scalability:** Built reusable component libraries using MUI and Styled Components and improved application performance.
- **Product-Minded Recommendations:** Identified functional gaps beyond surface-level UI/UX issues and proposed practical improvements with direct business value, typically working through focused discussions with management, designers, and backend engineers.
- **API & State Integration:** Delivered UI and integration work on core product screens using GraphQL and React Query.

Full-Stack Web Developer | Freelance

Remote (Tehran, Iran) | Jun 2020 – Mar 2022

- **End-to-End Delivery:** Managed the complete lifecycle of web applications, translating business requirements into scalable solutions using Laravel, Vue.js, and React.js.
- **Architecture & Logic:** Architected robust database schemas using MySQL and implemented complex back-end logic, ensuring data integrity and application efficiency.
- **Code Quality:** Applied Clean Code principles and TypeScript to ensure long-term maintainability and performance of the codebase.

Personal Projects

NOV 2025 – AUG 2026

Mini-Jira | Enterprise Project Management SaaS

[Live Demo](#) | [Github Link](#)

- **Architecture:** Engineered a scalable SaaS using Next.js 16 (App Router) and Atomic Design for modular, maintainable code.
- **State Management:** Managed complex global state, including tasks, chats, users, and filters, with Redux Toolkit, synchronized in real time using Firebase Firestore listeners.
- **Media Pipeline:** Built a custom in-browser video compression pipeline using FFmpeg WASM and an image cropping and optimization pipeline using react-easy-crop, offloading heavy processing from the backend.
- **Support & Communication Hub:** Built a real-time support chat using Firestore, with a custom Slate.js editor, voice recording using RecordRTC, and audio waveform visualization using WaveSurfer.js.
- **SaaS Billing:** Implemented end-to-end Stripe subscription logic, including monthly/yearly plans, trial mode, and API-driven success/failure flows.
- **Access Control & Quality:** Built Role-Based Access Control using custom authentication and role guards, and covered core components such as forms and modals with Jest and React Testing Library.

Google Calendar Task Manager | SaaS

[Github Link](#)

- **Authentication:** Engineered a secure Google OAuth 2.0 (Implicit Flow) integration with in-memory token storage to avoid cross-tab synchronization issues and client-side storage risks.
- **Business Logic:** Centralized all calendar CRUD operations and state management, including loading and error states, into a single custom hook (useGoogleCalendar), isolating business logic from the UI.
- **Scheduling Engine:** Built a FullCalendar-based interface for viewing, creating, editing, and deleting events, with modal-driven confirmation flows.
- **Forms & Validation:** Implemented React Hook Form with Yup, including cross-field validation to ensure that the end time follows the start time.
- **Quality Assurance:** Covered core logic and components, including schemas, modals, and inputs, with Jest and React Testing Library unit tests.
- **Performance:** Optimized load times using React Suspense and lazy loading for modals and heavy components.

Selected Professional Projects — Apsy

Infuuse | B2B Business Automation SaaS (Enterprise Business Platform)

- **Scalability:** Sole front-end developer for a multi-tenant B2B platform built with Next.js and GraphQL, working alongside a backend team of 4 engineers, 3 QA testers, and other teammates. Owned the front-end architecture and technical decisions end-to-end beyond the initial company boilerplate and built a modular UI system using Atomic Design.
- **Unified Inbox:** Built a real-time unified inbox using WebSocket, merging live chat, Twilio SMS/calls/video, and Gmail messages into a single conversation view.
- **Security & Integration:** Built hierarchical route protection and real-time communication modules integrating Twilio and Google OAuth.
- **Billing & Reporting:** Implemented Stripe subscription billing for monthly, yearly, and custom plans with discount logic, as well as analytics dashboards using Chart.js for tickets and calls across custom time ranges.

- **Data Handling:** Managed high-frequency data updates using React Query and Valtio, implemented drag-and-drop ticket management using react-beautiful-dnd, and built complex form validation with React Hook Form and Yup.
- **Productivity:** Integrated a custom Slate.js editor and media pipelines to streamline user workflows.

Octobit | Enterprise EdTech Scenario & Assessment SaaS

- **Dynamic Engine:** Owned the front-end architecture for a rule-based branching engine, working alongside 2 QA testers and other teammates, enabling unlimited user paths based on dynamic assessment metrics.
- **Visual Editor:** Built an interactive Node-Graph Editor using React Flow for visual scenario configuration, with automated integrity checks.
- **Admin & Access Control:** Built an admin panel for scenario and category creation, including pre-publish validation and safe publish/unpublish handling, as well as team management with email-based member invitations, role assignment, and admin activation.
- **Progress Visualization:** Engineered SVG-based, color-coded progress indicators tied to dynamic scoring, alongside Recharts dashboards for usage and payment tracking.
- **Biometric & State:** Integrated AWS Amplify for real-time audio stress analysis and managed complex state across multi-role dashboards using Valtio and Redux Toolkit.
- **Enterprise Features:** Built a multi-tenant billing system using Stripe, real-time notifications using WebSockets, and automated certificate generation upon scenario completion.

Technical Skills

- **Core:** Next.js | React.js | Vue.js | TypeScript | JavaScript (ES6+)
- **Architecture & Patterns:** System Design | Atomic Design | Clean Code
- **Data Layer:** GraphQL | React Query | RESTful APIs
- **State:** Redux Toolkit (RTK)
- **UI/UX & Animation:** Tailwind CSS | MUI | Styled Components | Framer Motion
- **Forms:** React Hook Form | Yup
- **Integrations & Multi Media:** Stripe | Socket.io | WebSocket | Google OAuth 2.0 | Slate.js | FFmpeg | Twilio
- **Quality:** Jest | React Testing Library
- **Backend, BaaS & Cloud:** Firebase (Firestore/Auth) | Supabase | Laravel | MySQL | Azure | Jira | AWS
- **Methodologies:** Agile/Scrum

Education Bachelor's degree in Software Engineering.
